0 I would like to thank many people for their support, expertise, guid-ance, and encouragement during this project. First of all I would like to thank God, without Him this would not be possible. Second, I would like • to thank my mom, pa, big mom, and granddaddy. Third, I would like to thank my family for all their love and support, especially my Tia that calls • me every day and asks me "What have you accomplished today?" Next, • I would like to thank all of my friends that support me all the time. This • book series would not have been possible without the continual support • • of all of them. Finally, I would like to thank everyone that has helped • me write this book. There have been many people from the Gigglenook • Team that have worked on this project. Thank you to all of you for your • continual support. • 0 0

Author's Note

Welcome to this book!

I am so excited that you are here to share this with me. This is the every-• thing you ever wanted, needed, thought you might need, never even knew that you needed mega book of guided math subtraction templates. This book is organized by the priority standards topics that you • will teach in k-2 for adding and subtracting within 20. It is written as a k-2 book in the spirit of acceleration and differentiation. The templates are differentiated along the learning progression so that you can meet your students where they are in small groups. How to Use this Book! This book has templates that the teacher can use for guided math groups, whole class activities, workstations and homework! The teacher can pull the different templates and make a binder for each person in the group. In the binder, put the templates in sheet protectors or laminate them so they can be used over and over again! Each student will have their own binder and they can use it as needed! **Big Ideas/Priority Standards** This book is aligned to the Big Ideas/Priority standards in k-2. It can be used as a supplement to any program. We have created a variety of templates to address the variations in state standards. These templates will provide you a way to reach back to catch up as well as extend learning for those students who are ready to go to the next steps. Learning Trajectories Speaking of steps, we have based all of our templates with the learning trajectories in mind. A learning trajectory is a developmental path that shows the landscape of learning a particular concept. Clements and Sarama have written extensively about learning trajectories (www.learningtrajectories.org). In the front of each book, you will find the learning trajectories for the topic.

 $\bullet \bullet \bullet \bullet \bullet$

Guided Math Guided Math is a way of teaching students in small groups. Small groups allow us to get up close and personal with our students and their learning. In a small guided math group, there should be no more than 3-5 students. Groups meet for 10-15 minutes. The focus is on DOING MATH. These templates. help you to do just that! They provide a space for students to explore, think, talk and work. In the small guided math group, students will make sense of math through working with their • peers, their teacher and the different math materials (thinking) mats, manipulatives, vocabulary/language talk frames). While students are working together, the teacher guides them, asks important questions and provides the necessary feedback on their attempts at making sense of the math so that they can make the necessary connections and corrections and build a deeper understanding of the math concepts. The learning spirals and children build on prior knowledge as they engage in new experiences. (Dewey 1933/1998; Piaget, 1972; Vygotsky, 1978; Bruner. 1973, 1990). In the guided math group, the student's should spend most of the time doing math rather than listening to the teacher talk about math. Experiences are scaffolded in a way to maximize the learning opportunities. Students are working in their Zone of Proximal Development, meaning that they are working at a level that is just right, not too easy and not too difficult (Vygotsky, 1978). Through interaction with more capable peers, adults • who are facilitating their learning and artifacts (in this case) appropriately selected materials such as manipulatives, books, computer programs etc.), students make meaning of the math • (Vygotsky).

Differentiated Instruction

•

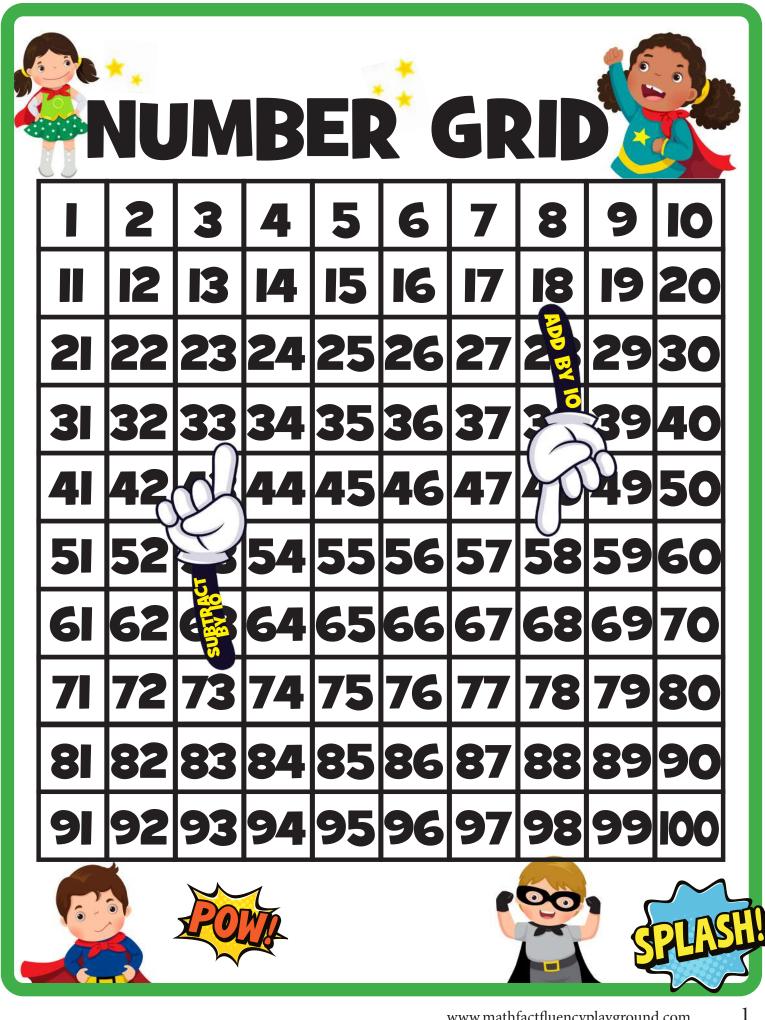

As Coco Aguirre (my mentor teacher) had hanging above • the threshold of her door, "If a student doesn't learn the way you teach, then teach the way they learn." This is a simple but powerful truth. Meet the children where they are and then take • them to the next level. For me, differentiation is about always asking myself, "If they aren't getting it, what can I do differently?" These templates provide you an option to scaffold • the learning so that all students have access to the grade level • content! Tomlinson (1999) speaks of how differentiated instruction. • results in academically responsive classrooms. In this type of classroom teachers are aware of the academic levels of their students and create curriculum designed to respond to their needs. Tomlinson stated that at its most basic level, differentiating instruction means "shaking up" what goes on in the classroom so that students have multiple options for taking in information, making sense of ideas, and expressing what they learn. • In other words, a differentiated classroom provides different avenues to acquiring content, to processing or making sense of ideas, and to developing products so that each student can learn effectively (2001).

While differentiation "advocates attending to students as individuals, it does not assume a separate assignment for each learner"(Tomlinson). "Differentiation needs to be student-centered, rooted in assessment, and dynamic" Serravello, 2010. We are constantly adjusting our teaching in response to what students are telling and showing us in their work and talk. Teachers who differentiate must take the time to get to know their students well. They have to understand them as people, learners and know what motivates them to reach their goals. Robb notes that "Differentiation is a way of teaching, it's not a program or a package of worksheets. It asks teachers to know their students well so they can provide each one with experiences and tasks that will improve learning" (2008, p.13).

Math Talk

One of the most important things that happen in the math class is the discussion. We have to teach students to be active participants and engaged listeners. We want them to respect each other deeply and seek to truly understand each other without judgment. They have to learn to develop and defend their thinking, justify their answers and respectfully disagree with each other. The National Council of Teachers of Mathematics (NCTM) defines math talk as "the ways of representing, thinking, talking, and agreeing and disagreeing that teachers and students use to engage in [mathematical] tasks" (NCTM, 1991).

Questioning It is so important to ask good questions. The questions should reach beyond the answer. As Phil Daro notes, we have togo"beyondanswer-getting(https://vimeo.com/79916037)." The questions in the guided math group should be designed to get students to understand more fundamentally the mathematics of the grade level. Good questions don't just happen, they are planned for. The teacher should know ahead of time the types of questions that she will ask and why she will ask them. In the plan for the lesson, the teacher should brainstorm some possible questions that push student thinking. These are not yes or no questions, but rather ones that require students to explain themselves, show what they know and defend and justify their thinking.

Math Fact Fluency Playground

See it, do it, learn it!

Math Fact Fluency Playground has one mission: Every student can learn and do math!

We work with teachers, schools, districts, regions and state educational agencies to help create a better math world. We believe that when teachers know more students soar! We believe that together we can change the world by creating research-based, engaging, student-friendly, classroom-tested math resources. Building on the research that says instruction is the linchpin and creative, evidence based resources are a powerful tool, we provide powerful pd and amazing resources to help you turn your math story around!

Guided Math TEACHER'S HUNDRED GRID

This Teacher's Hundred Grid Resource Toolkit was created to help teach with hundred grids. There are many different templates, activity sheets and blackline masters to differentiate instruction. Use these resources to scaffold access to grade level content for all your students!

NUMBER GRID

The Guided Math Teacher's Hundred Grid Toolkit is the essential resource for teachers to prepare and deliver hands-on, standards-based, visual lessons.
