

A vibrant owl-themed board game designed for children to practice addition. The board features six concentric paths, each with a different color and a unique set of addition problems. The paths are shaped like snakes winding through a purple forest. The paths are: 1) A blue path starting at the top with the equation $2+4$. 2) A pink path starting at the bottom with the equation $2+9$. 3) A green path starting at the right with the equation $3+5$. 4) An orange path starting at the left with the equation $1+6$. 5) A red path starting at the bottom-left with the equation $3+9$. 6) A yellow path starting at the top-right with the equation $1+5$. Each segment of the paths contains a math problem for the player to solve. The paths lead to a central 'FINISH' circle where the player can roll a die or spin a spinner to determine their next move. The board is surrounded by cartoon owls of various colors and patterns, some with wings spread wide. The background is a dark purple with a subtle wood-grain texture.
